MSS 08

The Muti Sampling System MSS 08 enables the connection of central measuring devices (e.g., UF-CPC[1] or ENVI-CPC[2]) up to eight different sampling ports and easy switching between them. This can be useful, e.g., for nanoparticle concentration monitoring in different rooms or along a process with a single measuring device.

Benefits

- Automatic change between 8 measuring positions
- Reduces acquisition and operating costs

Applications

- Air quality surveillance in different rooms
- Process monitoring on multiple positions

[2] condensation particle counter ENVI-CPC: https://www.palas.de/en//en/product/envicpc

Volume flow	0 – 10 l/min
Power supply	115 – 230 V, 50/60 Hz
Response time	3 s (for change of position)
Aerosol inlet connection	8 mm
