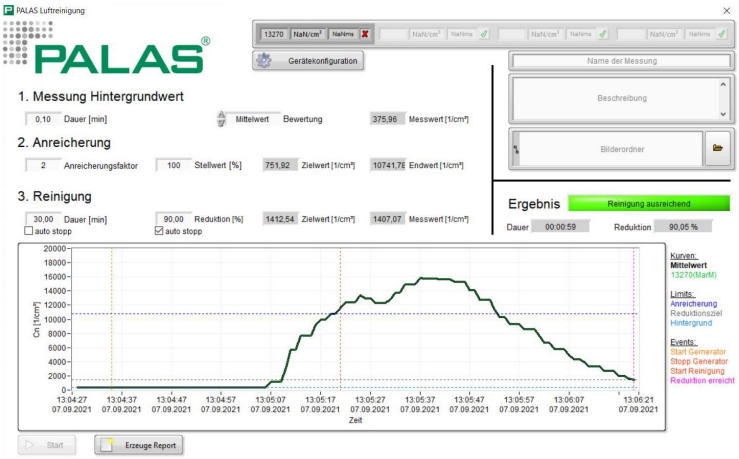
# AQCONTROL



With the AQControl software, in addition to indoor air quality, effectiveness tests for room air cleaners can be carried out directly on-site (real room situation) - even if no person is present.

Up to four measuring devices of the type AQ Guard[1] and one aerosol generator, PAG 1000[2] , can be linked and controlled. The measuring devices are connected via Wi-Fi, and the aerosol generator via USB.

## 优势

## 应用领域

- Effectiveness of indoor air filters and ventilation measure in
  - schools
  - offices and conference rooms
  - production halls
  - event venues
