MSS 08

The Muti Sampling System MSS 08 enables the connection of central measuring devices (e.g., UF-CPC[1] or ENVI-CPC[2]) up to eight different sampling ports and easy switching between them. This can be useful, e.g., for nanoparticle concentration monitoring in different rooms or along a process with a single measuring device.

优势

- Automatic change between 8 measuring positions
- Reduces acquisition and operating costs

应用领域

- Air quality surveillance in different rooms
- Process monitoring on multiple positions
