

BEG 1000

Many research, development, and quality assurance applications require solid particle aerosols from powders and dusts.

For over 20 years, the BEG 1000 has been successfully used for the reliable dispersion of non-cohesive powders, e.g., to generate test dusts and flame soot within the size range of $< 100 \text{ nm} - 200 \mu\text{m}$. The unique advantage of this dispersion system is that it can be used continuously with high dosing constancy for low mass flows of up to 8 g/h with the BEG 1000 A and for high mass flows of up to 6 kg/h with the BEG 1000 B. The unique built-in components in the reservoir, the smooth conveyor belt, and the special ejector dispersion nozzle enable the BEG 1000 to provide a finely dispersed aerosol with optimal dosing constancy.
