

# BEG 2000

The BEG 2000 is equipped with automatic mass flow control. For this purpose, the dosing unit of the BEG 2000 is continuously weighed. The data is constantly recorded and evaluated by a touchscreen PC via a serial interface.

Thus, the dispersed dust quantity is known continuously and can be automatically readjusted. The following inputs can be made for the exact dosing of the aerosol: input of the mass flow in g/h, automatic mass flow control, recording of powder-specific calibration curves, external control via PC or Modbus RTU, network-compatible

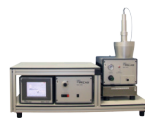

## BENEFITS
