

# ENVI-CPC 200

The ENVI-CPC 200 is currently the only butanol-based particle counter with high efficiency, which can directly determine the highest concentrations of  $2 \cdot 10^6$  particles in single counting mode in high resolution without dilution. It is part of our modular nanoparticle measurement system. It can be combined arbitrarily with different systems to measure ultrafine particles. Likewise, it is particularly suitable for long-term measurement of combustion or other aerosols with high concentrations of nanoscaled particles. The patented evaporator and condensation module is maintenance-free.

The system meets the requirements of the current standard EN 16976:2024 (Harmonized measurement of number concentrations using CPC) in all areas. It can be operated directly with a NAFION® based sampling system if desired. The pumps required for this are already integrated.

## BENEFITS

- The unique, patented way of providing the working fluid for unattended operation for months
- Ambient air monitoring without a dilution system
- Intuitive user interface with sophisticated software for data evaluation
- Limitless, integrated network connectivity that supports remote operation and data storage on the internet
- Powerful software package
- Low maintenance

## APPLICATIONS

- Aerosol Research
- Environmental measurements
- Environmental monitoring measurement networks
- Workplace safety and occupational exposure studies
- Traffic emission monitoring
- Health studies
- Mobile aerosol studies

## FEATURES

- Automatic measurement data storage
- Measurement of the particle size distribution of condensed particles for quality assurance
- Integrated pump
- Integrated computer with 7" touchscreen

## DATASHEET

Measuring principle	Condensation of ultrafine particles, optical sensor for determining the number concentration and size distribution of the condensed particles
Measurement range (number $C_N$ )	$2 \cdot 10^6$ particles/cm <sup>3</sup> (single count mode)
Measurement range (size)	Approx. 5 µm
Volume flow	0.9 l/min +/- 2% (optional 0.5 l/min additional) (pressure loss isotherme capillary)
Time resolution	1s - 60s
Interfaces	USB, Ethernet (LAN), weather station/butanol level sensor, RS-232, T/rH sensor
User interface	Touchscreen, 800 • 480 pixel, 7" (17.78 cm)
Protocols	UDP, UIDEP, B/H, MODBUS TCP/RTU, ASCII TCP/Seriell
Data logger storage	Approx. 6 GB data storage (2 years)
Detection efficiency (at low particle size)	D50 = $10 \pm 1$ nm (others on request); D90 < 20 nm, D95 @ 40 nm $\pm 10$ nm, D90 @ 1000 nm $\pm 100$ nm
Data acquisition	Digital, 20 MHz processor, 256 raw data channels
Light source	Long term stable LED
Housing	Tabletop device
Power supply	115 – 230 V, 50/60 Hz
Power consumption	Average power consumption: 40 W
Installation conditions	Operating temperature: +10 – +30 °C, operating humidity: < 95% (non-condensing)
Accuracy	+/- 2% (according to calibration certificate)
Response time	$t_{90} < 3$ s
Working fluid	n-Butanol (>99.5%)
Dimensions	330 • 380 • 240 mm (H • W • D)
Weight	Approx. 10 kg
Resolution	Min. 1s
Data Management	Prepared for connection to the Palas Cloud MyAtmosphere ("MyAtmosphere-ready")

## NORMS AND CERTIFICATES

EN 16976:2024-09, ISO 27891:2015
