

# MP 10

MP 10 are microparticles with a mean diameter of  $10.3 \mu\text{m}$ . The distribution of this dust is monodisperse; the geometric standard deviation of the distribution is only  $2.59 \mu\text{m}$ . Due to this small distribution, these dusts are used for scientific analysis and can also be used to calibrate measuring devices.

## BENEFITS

- Solid particles with very small monodisperse distribution
- Long service time of the created aerosol

## APPLICATIONS

## DATASHEET

Particle material	PMMA	Particle diameter (maximum)	75 $\mu\text{m}$
Particle diameter (minimum)	0.5 $\mu\text{m}$	Particle diameter (mean)	10.3 $\mu\text{m}$
Geometric standard deviation (volume)	2.59 $\mu\text{m}$
