

# MP 20

MP 20 are microparticles with a mean diameter of  $20.56 \mu\text{m}$ . The distribution of this dust is monodisperse; the geometric standard deviation of the distribution is only  $4.56 \mu\text{m}$ . Due to this small distribution, these dusts are used for scientific analysis and can also be used to calibrate measuring devices.

## BENEFITS

- Solid particles with very small monodisperse distribution
- Long service time of the created aerosol

## APPLICATIONS

## DATASHEET

Particle material	PMMA
Particle diameter (maximum)	75 $\mu\text{m}$
Particle diameter (minimum)	0.5 $\mu\text{m}$
Particle diameter (mean)	20.56 $\mu\text{m}$
Geometric standard deviation (volume)	4.56 $\mu\text{m}$
