

MP 40

MP 40 are microparticles with a mean diameter of 40,06 μm . The distribution of this dust is monodisperse; the geometric standard deviation of the distribution is only 3,56 μm . Due to this small distribution, these dusts are used for scientific analysis and can also be used to calibrate measuring devices.

BENEFITS

- Solid particles with very narrow monodisperse distribution
- High lifetime of the generated aerosol

APPLICATIONS

DATASHEET

Particle material	PMMA	Particle (maximum) diameter	75 μm
Particle diameter (minimum)	0.5 μm	Particle (mean) diameter	40.06 μm
Geometric standard deviation (volume)	3.56 μm
