

The autonomous PAG 1000 (Portable Aerosol Generator) offers maximum flexibility for generating droplet aerosols, for example, from DEHS or low-concentration salt solutions.

The generator is small and, with a weight of only 5 kg, quite handy; being battery-powered makes it independent and quickly ready for operation. The fact that no compressed air connection is required demonstrates its flexible application options even more. A battery charge is sufficient for one working day, and if needed, the device also operates on mains operation.

## OPERATION PRINCIPLE

### PORTABLE AEROSOL GENERATOR OF DROPLET AEROSOLS

Thanks to the changeover operation of the internal pump for aerosol generation, the PAG 1000 offers a wide range of settings for concentration. The electrical control via the internal display permits the reproducible set of the particle concentration. Sample applications for the PAG 1000 include testing of laminar flow boxes, a clean room acceptance test, a test of smoke detectors, HEPA/ ULPA filter testing, laboratory applications, or flexible aerosol supplies on site.
