

RBG 1000 GD

The RBG 1000 G has a higher gear ratio. This means that at very low feed rates ($< 10 \text{ mm/h}$) the feed rate can be better adjusted by means of a potentiometer. Optional operation with low pressure from 300 mbar absolute is possible. The feedstock reservoirs with a diameter of 7, 10, 14, or 20 mm are pressure-resistant. For operation with low pressure, special pressure-resistant feedstock reservoirs are needed. Their piston is strongly connected to the feeding unit by a claw. This enables an undisturbed operation with low pressure. The feedstock reservoir with a diameter of 28 mm is not pressure-resistant but can be used with the RBG 1000 ID under atmospheric conditions.

In the RBG 1000 D pressure-resistant version, compressed air is used as the disgerger gas. Operation with nitrogen or other inert gases is not permitted.
