

Purchasing order (please print)

Worried about your protective mask efficiency? Order a simplified type test today.

Based on more than 35 years of experience in particle and aerosol generation and measurement we will be happy to support you.

With our test rig **PMFT 1000** efficiency of half-masks as well as fleece can be performed, either with oil or NaCl. And this is even better than the standard EN 13274-7 due to additional determination of penetration for particle sizes from 100 nm to 3 µm (oil), or from 100 nm to 5 µm (NaCl) respectively.

With the **Mas-Q-Check** protective effect of a mask is tested with ambient air and a standardized test dummy-head in the particle size range of 140 nm to 10 µm. The protective effect is a combination of penetration and leakage.

YOUR OPTIONS (please select by checking boxes):

1. You send us your mask(s) for testing

- PMFT 1000 measurement incl. test report (art.no. 6847)

Measurement of penetration and efficiency over particle size range **with oil**

400,- EUR (net) per mask; # of masks: _____

Measurement of penetration and efficiency over particle size range **with NaCl**

400,- EUR (net) per mask; # of masks: _____

- Mas-Q-Check incl. test report (art.no. 6848)

Quick determination of penetration with test dummy-head acc. to EN 149 **with test aerosol ambient air**

200,- EUR (net) per mask; # of masks: _____

2. You make an appointment at Palas® (max. 1 visitor, 1 hour testing)

- PMFT 1000 and Mas-Q-Check measurement incl. test report (art.no. 6849)

Always both tests with this options, so measurement of penetration and efficiency over particle size range **with oil OR NaCl**

as well as

Quick determination of penetration with test dummy-head acc. to EN 149 **with test aerosol ambient air**

600,- EUR (net) per mask; # of masks: _____

Appointment: _____ AM/PM on _____ 2020
