

# AGF 2.0

The AGF 2.0 is an aerosol generator for atomizing liquids and latex suspensions with a constant particle rate and defined particle spectrum.

The AGF 2.0 system comprises an adjustable binary nozzle to adjust the desired mass flow and a cyclone with a cut-off of  $2 \mu\text{m}$ . As a result, virtually no particles  $> 2 \mu\text{m}$  are generated.

## 优势

- Exact adjustment of the operating parameters
- Number concentration ( $C_N$ ) can be varied by the factor of 10
- Particle size distribution remains virtually constant if  $C_N$  is modified
- Number distribution maximum is within the MPPS range
- Virtually no power losses
- Optimal concentration, no coagulation losses
- Resistant to numerous acids, bases, and solvents
- Robust design, stainless steel housing
- Easy to operate
- As opposed to the collision method, AGF 2.0 does not generate particles  $> 2 \mu\text{m}$  thanks to its cyclone.
- Because the AGF generates virtually no droplets  $> 2 \mu\text{m}$ , the consumption of materials is very low, thus ensuring a long dosing time.
- With the use of DEHS, the mean particle size is within the MPPS range for HEPA/ULPA filters
