AQ Guard

AQ Guard, currently the most advanced compact analyzer for determining indoor air quality, continuously and reliably analyses airborne fine dust particles in the range $0.175 - 20$ μm ([*1] IAHP-Package starting from 0.15 μm). A newly developed mass conversion algorithm calculates PM values based on single particle optical light scattering, considering signal duration and shape.

AQ Guard simultaneously calculates and stores PM_1, $PM_{2.5}$, PM_4, and PM_{10}, the total dust load, the particle number concentration CN, and the particle size distribution. Thus, AQ Guard provides comprehensive, accurate information on indoor particulate matter. This is only possible in this form with a counting single particle measurement method.

优势

- Technology based on the type approved Fidas® 200 series (EN16450 and MCERTS); simultaneous measurement of C_N, PM_1, $PM_{2.5}$, PM_4, PM_{10}
- With the "Indoor Air Hygiene Professional" extension: increased counting efficiency for nano-scaled particles from 0.15 μm
- Computation of air quality index based on measurements of particulates, CO_2
- Estimation of infection risk based on measurements of CO_2 and particulate matter
- High accuracy due to advanced algorithms
- Long term stable due to self-calibration for measurement of flow rate, particulates, and gaseous pollutants
- Operates on AC, DC, or power-over-Ethernet

特点

- On-site calibration and adjustment (particle size and volume flow)
- 7″ touch display
- Data visualization via Palas Cloud ("MyAtmosphere-ready")
- Measurement data acquisition per second
- Workplace measurements via AQControl: connection of up to six AQ Guard systems and one PAG 1000 aerosol generator possible

应用领域

- Industry: production processes, bulk material handling (mixing, discharge, storage, packaging, etc.), fenceline monitoring
- Construction sites: roads, railroads, demolition sites
- Buildings: schools, kindergartens, hospitals, hotels, offices, public service buildings,
- Residential buildings near construction sites or other polluted areas
- Public transportation: airports, train stations, tramway & underground stations, cruise ships, passenger cabins, e.g., in trams, train

技术数据

测量原理	Optical light scattering at single particles
报告数据	PM_1, $PM_{2.5}$, PM_4, PM_{10}, TSP, CN, particle size distribution, ambient pressure, ambient temperature, rel. ambient humidity, CO_2, Infection Risk Index, Air Quality Index (depending on configuration)
测量范围(数量浓度)	0 – 20,000 particles/cm³
测量范围(粒径)	0.178–20 μm (with IAHP extension from 0.150 μm)
测量范围(质量)	0 – 20,000 μg/m³
测量不确定性	R2 > 0.98 for $PM_{2.5}$ and R2 > 0.94 for PM_{10} versus EN 16450-certified Fidas® 200 (15 min average, each)
体积流量	1 l/min $\stackrel{\triangle}{=}$ 0.06 m³/h
Size channels	64 (32/decade)
接口	USB, Ethernet (LAN), Wi-Fi, 4G (optional via LTE stick)
User interface	Touchscreen, 800 • 480 pixel, 5″ (12.7 cm)
Protocols	UDP, ASCII
Data logger storage	10 GB
软件	PDAnalyze
Data acquisition	Digital, 22 MHz processor, 256 raw data channels
Light source	Long term stable LED
Operating system	Windows 10 IoT Enterprise
Power consumption	< 20 W
Installation conditions	-20 – +50 ℃
Response time	1 s, moving average configurable
Aerosol conditioning	Optional: thermal with compact IADS
Dimensions	175 • 280 • 140 mm (H • W • D)
重量	2.4 kg
Linearity	0.95 – 1.05 (measured against EN 16450 certified Fidas® 200)

标准和证书

ISO 21501-1
