

# MP 40

MP 40 are microparticles with a mean diameter of 40,06  $\mu\text{m}$ . The distribution of this dust is monodisperse; the geometric standard deviation of the distribution is only 3,56  $\mu\text{m}$ . Due to this small distribution, these dusts are used for scientific analysis and can also be used to calibrate measuring devices.

## 优势

- Solid particles with very narrow monodisperse distribution
- High lifetime of the generated aerosol

## 应用领域

## 技术数据

Particle material	PMMA
Particle diameter (maximum)	75 $\mu\text{m}$
Particle diameter (minimum)	0.5 $\mu\text{m}$
Particle diameter (mean)	40.06 $\mu\text{m}$
Geometric standard deviation (volume)	3.56 $\mu\text{m}$
