PLG 2000

The PLG 2000 is a cold atomizer intended for use in air-conditioned rooms. If the room cannot be air-conditioned, then a heatable version of the device should be used, e.g., PLG 2000 H.

Model Variations

PLG 2000 H
Version heatable up to 100 °C

PLG 2000 HS
Heated version with automatic refill unit

工作原理

AEROSOL GENERATOR FOR THE DEFINED ATOMIZATION OF OILS

The liquid to be dispersed is simply filled in the reservoir. The nozzle system developed by Palas® is immersed in the liquid. This nozzle system is based on the Laskin principle and guarantees extremely precise dosing constancy with uniform particle size. The mass flow is adjusted using the volume flow through the nozzle. A pressure regulator and a manometer on the device control the volume flow.

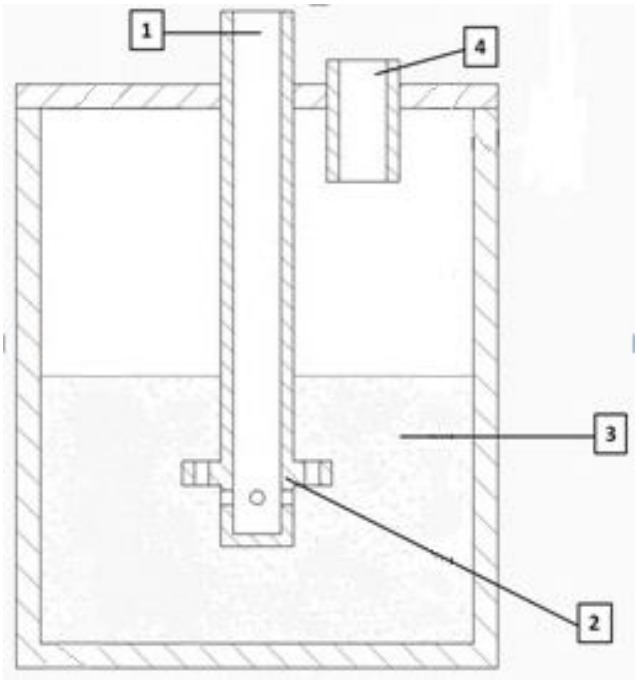

Fig. 2: Functional principle of the PLG series

1) Compressed air

2) Special Laskin nozzle

3) Aerosol substance

4) Aerosol outlet

This nozzle system is based on the Laskin principle and guarantees extremely precise dosing constancy with uniform particle size (see Fig. 3).

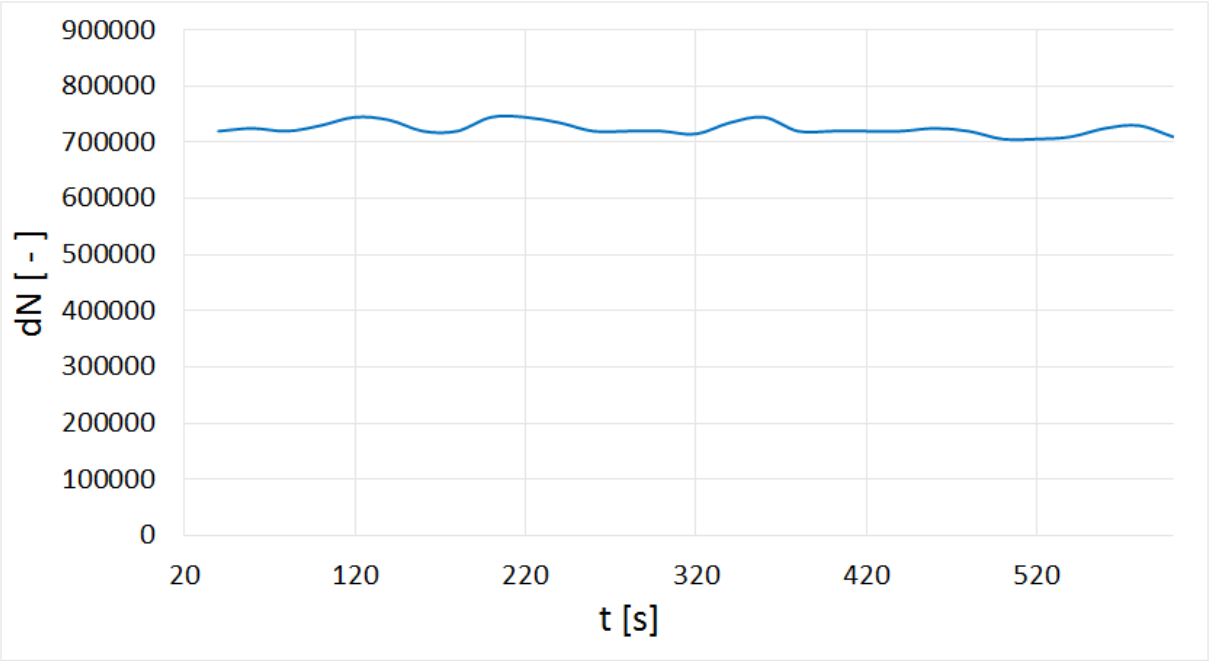

Fig. 3: Highly constant particle concentration over time at a resolution of 30 s

The PLG 2000 generates mass flows of up to approx. 20 g/h max. (depending on the aerosol substance in use).

优势

- Excellent short-term and long-term dosing constancy
- Best reproducibility with respect to particle size distribution and particle concentration
- Large mass volume range (very low and very high)
- Robust design (optionally resistant against chemically aggressive liquids)
- Compact and light
- Easy to operate, proven in industrial applications
- Reliable function
- Low maintenance

技术数据

体积流量	10 – 35 l/min
Mass flow (particles)	20 g/h (white oil)
Filling quantity	300 ml
Aerosol outlet connection	$Ø_{inside}$ = 9 mm, $Ø_{outside}$ = 12 mm
Mean particle diameter (number)	0.4 μm (DEHS)
Dimensions	300 • 330 • 270 mm (H • W • D)
重量	Approx. 9 kg

应用领域

- Filter industry/oil separators
  - Determination of separation efficiency
  - Determination of fractional separation efficiency
  - Loading test
- Test of cooling lubricant separators
- Comparison of particle measurement devices
- Tracer particles
- Flow visualization
