

The aerosol sensor welas[®] 1100 P and the aerosol sensor welas[®] 1200 P are equipped with a pressure-tight cuvette to ensure isobaric and isothermal sampling into the sensor's measurement volume. The Promo[®] system is usually calibrated for the operating volume flow. As the operating volume flow changes with pressure, it is advantageous for the user if automatic volume flow regulation for the sampling volume flow is provided for in the device.

In the Promo[®] 1000 P, the pressure of the carrier gas is measured, and the required operating volume flow is automatically set to 5 l/min.
